

THE MEDICAL COLLEGE OF THE TIANJIN UNIVERSITY CONFIRMS THE EFFICACY OF THE OXYGEN-OZONE THERAPY AS POTENTIAL TREATMENT AGAINST COVID19

April 10, 2020 (Italy - Orbisphera.org)

In an official letter from the Medical College of the Tianjin University (China), sent to Dr. Antonio Galoforo, the board member of the SIOOT (Scientific Society of Oxygen Ozone Therapy), the professor Dong Ming, Dean of the Medical College, wrote: «Inspired by your suggestions and your experience in infectious diseases, we have made some progress in the treatment of Covid-19 positive patients by treating them with Oxygen Ozone Therapy».

In this regard, the professor Dong Ming recalls that, as the Covid-19 epidemic raged in China, a video conference was organized in mid-February with Dr. Galoforo along with other 272 Chinese medical doctor and university staff.

«We sincerely appreciate – the letter continues – that you and your colleague have shared your experience in the field of ozone therapy with us».

The professor Dong Ming highlighted that the Medical College of the Tianjin University, in collaboration with a group of specialists from the Haihe Hospital, discussed the ozonated autohemotherapy scientific protocols, and after treatments, as indicated by the shared procedures, the therapy was approved by the Ethics Committee from the Hospital itself. The therapy was finally registered as “clinical trial” in the Chinese Clinical Trial Registry.

Concerning the results, the professor Dong Ming reported that «four Covid-19 positive patients, including one critical case, one serious case and two normal cases, have been treated with Oxygen Ozone Therapy».

After the treatments, the symptoms of dyspnea, severe cough, chest anguish and asthenia subsided until they disappeared. In particular, the critically ill patient was recovered without using invasive mechanical ventilation or intensive care treatment. All four patients recovered were discharged without problems after verifying the viral inactivation (“viral clearance”) of Covid-19.”

Based on these results, the clinical effects of ozonated autohemotherapy performed at Haihe Hospital in Tianjin have demonstrated to be rapid and effective. This was important mainly for a severely ill patient, whose lung tissue damage has been alleviated and overcome.

As the pandemic from the Covid-19 is affecting the whole Europe, particularly the Italian country, the professor Dong Ming expressed his concern and condolences for the victims.

The Dean of the Medical College also offered his availability to collaborate with Italian institutions and experts in order to share information and assistance regarding the practice of Oxygen Ozone Therapy.

The letter ends with a beautiful sentence from Seneca – «The earth is one country. We are waves of the same sea, leaves of the same tree, flowers of the same garden...» – along with the thanks and best wishes for good health and family happiness.

Interviewed by “Orbisphera”, Dr. Galoforo said that as early as the end of January, when the virus was still confined to the Wuhan area, he had proposed to the Chinese scientific community to use the Ozone Ozone Therapy to counter the spread of Covid-19.

In mid-February, supported by consolidated institutional relations already active for months with China, Dr. Galoforo welcomed a delegation of Chinese doctors in Italy and held a conference call with prof. Chen Qun, Secretary General of “China Life Science Security” in Beijing.

The conference call was attended by 272 executives from the Ministry of Health, primary from some Beijing hospitals and managers from Chinese research centers.

Dr Galoforo illustrated the scientific evidence of the protocol on the use of ozone, raising the interest of the participants in this type of approach to combat Coronavirus.

On February 21, when the Covid-19 virus began to spread in Italy, Dr. Antonio Galoforo and his team from the Fatebenefratelli of Brescia have published a research on the SIOOT website which highlights the important results obtained by ozone therapy in the treatment of pneumonia as well as in the contrast of other viruses similar to Covid-19, such as Sars and Ebola. All supported by an extensive scientific bibliography.

In the following weeks Dr. Galoforo has further activated itself at an international level by collecting important positive feedbacks through Dr. Li Peter of Guaghzuo, who reported the significant results of some Chinese hospitals that were successfully using ozone therapy (Tianji Haihe Hospital and The Second Hospital of Tanjin Medical University).

Equally important indications came from California by Dr. Robert Rowen, who has activated a specific department of his clinic to treat patients infected with Covid-19 with Oxygen Ozone Therapy.

Dr. Rowen, in recent days, has published a study in the scientific journal “Journal of Infectious Diseases and Epidemiology” entitled “A Plausible Penny costing effective treatment for Coronavirus-Ozone Therapy”.

In light of these additional international scientific evidences, Dr. Galoforo informed the competent institutions – first of all the Lombardy Region – underlining the validity of ozone therapy and in particular its low cost and the absence of side effects.

«Now – concluded Galoforo – I expect ozone oxygen to be used in all hospitals that treat patients with Covid-19».
