Dear Lt. Governor Patrick and Secretary Spaw,

I am writing regarding the Senate rules that require a negative COVID-19 rapid test result or two injections of the COVID-19 vaccines in order for legislators, staff or the public to have access to Senate Chambers.

Attached are pictures of the nasal swabs that show to be sterilized with ethylene oxide which is a known carcinogen as seen on <https://www.cancer.gov/about-cancer/causes-prevention/risk/substances/ethylene-oxide> website. These rules infringes upon Texans' rights to petition their government and there should never be a medical procedure forced upon any individual. These Senate rules represent a forced procedure to participate in Senate hearings and are being conducted without proper patient informed consent of potential risks and such coercion is a violation of the [Nuremburg Code](#).

“The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision.”

As stated in the March 10, HHS hearing, [Dr. Peter McCullough](#) with Baylor Health System (minute marker 13:48) stated that these Senate rules and procedures are more restrictive than screening procedures to enter hospitals which is temperature check.

Though I am not an attorney, I believe these rules could represent Culpable negligence.

“Culpable negligence means recklessly acting without reasonable caution and putting another person at risk of injury or death (or failing to do something with the same consequences).”

Here is a link to my testimony at the [March 23, 2021](#) Senate HHS Committee Hearing echoing similar reasons to stop the medical testing for COVID-19 to access our rights to the Senate Chambers which makes this information public record.

The following Senate Rules to access Senate Chambers as communicated to me by individuals with Texas Emergency Management Department at the testing tents.

1. Two injections of a COVID-19 vaccine.

On December 14th, 202 [US Surgeon Jerome Adams says](#), *"people still need to wear masks and socially distance after they've been vaccinated **because it doesn't prevent infection just severe illness.**"*

Question:

Since the vaccines only lessen the severity of serious illness and people can still be infected with SARS-CoV-2 and be able to infect others, why are two shots of a COVID-19 vaccines being considered the equivalent of a negative test?

Why are government and private businesses proposing a vaccine passport when the vaccines do not prevent infection of self or others?

2. A negative COVID-19 rapid-test result.

The sterile nose swabs required for rapid testing for COVID-19 are sterilized with Ethylene Oxide (EO).

"In smaller amounts, ethylene oxide is used as a pesticide and a sterilizing agent. The ability of ethylene oxide to damage DNA makes it an effective sterilizing agent but also accounts for its cancer-causing activity."

Senate members and staff are often required to test daily with a substance that according to [cancer.gov](#) is associated with *"Lymphoma and leukemia which are the cancers most frequently*

reported to be associated with occupational exposure to ethylene oxide. Stomach and breast cancers may also be associated with ethylene oxide exposure."

Question:

Why are Senate rules requiring Capitol staff, legislators and constituents to be subjected to a cancer causing agent being placed up their noses, just to exercise their rights to participate in the Texas legislative session?

Thank you for your efforts to revoke these rules and restore Texans' rights to participate in Texas government.

Sincerely,

Sheila Hemphill, CEO
