

My brother was dying, the oxygen ozone saved him...

April 20, 2020 (Italy – Orbisphera.com)

"Intubated and in intensive care for 12 days, my brother was dying. Then he was given ozone oxygen according to SIOOT (Scientific Society of Oxygen Ozone Therapy) protocol and now he is alive and healing".

Who talks like this is Sergio Maccarinelli, born in Treviglio in 1957, for many years working abroad as a company operator.

Maccarinelli has collaborated, among other things, in the management of humanitarian aid in Eastern Europe.

Back in Italy, he was amazed by the violence of the pandemic that is still raging especially in Bergamo.

We interviewed him and he told us an incredible story.

In mid-March the Covid-19 appeared in Sergio's family. His brother Cesare, born in 1961, tested positive for the virus.

Sergio started to assist him at home, with the drugs prescribed by his GP.

On March 19, Cesare had breathing difficulties and his oxygen saturation values were dropping rapidly.

On March 20, he was called 911 to hospitalize him. There were no beds available in the area, so Cesare was transported to a hospital in the province of Lecco.

Caesar's condition became more serious every day. First the oxygen mask was applied to him, then the Cpap helmet connected to a respirator, and finally it was necessary to admit him to the intensive care unit, where he was sedated and intubated.

Sergio Maccarinelli, to treat his brother, tried everything, found and made available all the experimental drugs available: Tocilizumab, Anakinra, as well as the antimalarial and retroviral drugs present in the treatment protocols.

On 29 and 30 March, Caesar's situation was rapidly plummeting towards an inauspicious outcome.

At that point Sergio remembered that, in 2016, he had practiced oxygen ozone therapy to combat an osteomyelitis contracted during orthopedic surgery to reduce a tibial plate fracture.

At that time he had heard several positive opinions about the use of ozone oxygen for the treatment of various diseases, including pneumonia. He decided to immediately contact Prof. Marianno Franzini, president of SIOOT International.

Franzini explained that SIOOT had formulated a medical protocol specifically for patients suffering from the Covid-19 virus.

Sergio decided, therefore, to propose the use of ozone oxygen in the hospital where his brother was hospitalized, but the doctors had neither the necessary equipment nor the necessary knowledge.

Since a patient in intensive care cannot easily be transported elsewhere, Sergio continued to press for permission to use ozone therapy.

But approval times were getting longer and longer, while Caesar was getting worse and worse as he approached the point of no return.

So, in consultation with Professor Franzini, Sergio rented a machine to produce ozone, bought the bags needed to practice the great self-emoinfusion (in accordance with the SIOOT protocol) and offered them free of charge to the hospital where Caesar was being hospitalized.

The hospital doctor, "in front of a dying intubated patient" (these are his exact words), agreed - as a "compassionate treatment" - to subject Caesar to daily ozone-enriched self-emoinfusions.

Applying the protocol indicated by SIOOT, the patient's condition gradually began to improve from the first day of ozone therapy. To the amazement of the doctor who was treating him.

To the point that on April 17th, after only 9 days of ozone therapy, Caesar was no longer in mortal danger and could be awakened and extubated.

At the beginning he was weak, still in need of respiratory physiotherapy, since they had intervened on him when he was already very serious, but, despite this, his improvements were called "impressive".

As confirmed by Prof. Franzini, on the basis of the experiences gained in other hospitals, it can be assumed that, if the first symptoms had been treated, the patient would probably not have needed to be intubated.

The patient would have been avoided a highly traumatic experience and there would have been a great saving for the healthcare facility in terms of costs and resources.

Extremely grateful for the collaboration received from Prof. Franzini, and grateful to the Good Lord for his brother's salvation, Sergio Maccarinelli offered to cover the cost of one month's rent of a car and equipment for the hospitals in the area that intend to practice ozone therapy on positive patients at Covid-19.

Sergio's hope is that "from this story a spark of hope can be born and, above all, that it can be done soon, because every day many patients suffer or even lose their lives".

If oxygen ozone was useful to save, or to facilitate the course, even of a single mother or a single family father, we would have obtained an important result.

According to Sergio, true angels intervened in this affair, who collaborated with San Leopoldo Mandic, to whom the hospital is named.

For what could be called an incredible "astral conjunction", Sergio has been devoted to San Leopoldo Mandic since the time he worked in Yugoslavia. And he still continues to frequent the Sanctuary of Padua dedicated to him, where the Friar Confessor St. Leopold worked for many years on behalf of the souls of the faithful.
