

## The Oxygen-ozone Therapy Could Stop Coronavirus. Apuzzo (AIRO): "Ready protocol to block infection without side effects"

April 10, 2020 (Italy – Sanita Informazione )

It could come from ozone therapy the most effective clinical response in patients with severe respiratory crises who have contracted Coronavirus. This is confirmed by the results obtained from the trial started in Udine: out of 36 serious patients with breathing difficulties, only one has been intubated, while for the other rapid recovery and discharge. A result that does not take by surprise the president of the International Academy of Research of Oxygen-Ozone Therapy, Professor Dario Apuzzo, who, comforted by the scientific data, explains why this practice can be successful.

"First of all, ozone is a very powerful antibacterial and antiviral," explains the professor in connection via Skype. Keep in mind that after 30 seconds of exposure to ozone of a virus on a slide, 99% is completely deactivated, so there is direct action on the virus. This means that the sooner you apply the intervention with oxygen-ozone therapy the better, because once the virus has nested inside the cells of the various organs, especially the lung, it becomes more complicated, because in a sense it is protected by the cell itself. But even then ozone works by modulating our body's immune system."

### HOW IT WORKS: DIRECT AND INDIRECT ACTIONS

"We say that ozone can give direct and indirect actions," continues Professor Apuzzo. The first ones are on the casing, the so-called capsid: modifying it, prevents attachment to the target cell; but it can also penetrate the virus through an oxidation process and, by changing its genetic code, substantially inactivate it."

"If you make a circulating virus inactive— analyzes the president of the International Academy of Oxygen-Ozone Therapy Research – this could represent a real immunogenic vaccine, or it could stimulate an immune response. So, by putting together direct action on the virus, the indirect action, through a stimulation of all the mechanisms that allow the organism to defend itself from external attacks, and the anti-inflammatory action together with an action of greater oxidation of the tissue, basically we have in our hand a very powerful drug, which is not really a drug because it is only oxygen".

### AUTO-HEMOTHERAPY

"The formula used is oxygen and ozone to the extent of fifty per thousand ozone compared to oxygen, so it is still a completely natural mixture. Through scientific studies, formula and efficacy on the body have been validated. Our protocol, adds Apuzzo, "is to use in a mode called great self-hemotherapy. It is an infusion of one's own blood that is basically first oxygenated and ozonized, then re-infused in a minimal amount. We talk about 200 ml that are ozoned in a closed-circuit machine, so there is no kind

---

of risk because the blood taken ends up in a bowl, the machine puts the ozone regulated by the doctor who performs the therapy and then re-infused it as a normal DR. What matters is the protocol, we have developed one that we want to test on as many patients as possible. The first results seem very encouraging. We are not asking for the suspension of basic antiviral therapy, but to add ozone therapy, because we believe it can completely speed up our body's defence processes," he concludes.
