

## **To stop Covid-19, more and more hospitals are using Oxygen-Ozone**

April 6, 2020

In the last few days several media have talked about hospitals that are using ozone oxygen therapy to treat the sick and stop the contagion of Covid-19.

At the Policlinico di Roma, Prof. Francesco Pugliese, after receiving the favourable opinion of the Ethics Committee, announced the start of ozone therapy, with a protocol that - according to press sources - provides for the ozonization of 200 millilitres of blood which is then reinfused on 50 patients found positive for the virus.

At the Hospital of Udine, Dr. Amato De Monte, director of the anaesthesia and resuscitation department of Santa Maria della Misericordia, explained that, out of 36 Covid-19 positive patients treated with ozone therapy, 35 were discharged and one entered the intensive care unit.

In the television program "Petrolio" directed by Duilio Giammaria, aired on April 4, Dr. Francesco De Caro explained that ozone is highly effective against bacteria and viruses, so in the hospital where he works it has been used to fight antibiotic resistance, and now he suggests to use it also against Covid-19.

In this context, it is important to spread the knowledge that the Scientific Society of Oxygen Ozone Therapy (SIOOT) has drawn up a very detailed medical protocol to treat Covid-19 patients.

There are 17 Italian hospitals that are currently practicing this protocol.

A first report has already been published and distributed in English and Spanish. These are the results of 11 patients, seriously and very seriously affected by Covid-19. In just 5 days of oxygen ozone therapy, administered with the SIOOT protocol, they all improved significantly. Of the five intubates, one was extubated. Of the less serious patients, one was healed immediately and discharged. The only one who died was in very serious condition: the virus had already damaged several vital organs and it was impossible to save him.

In order to try to understand and know more about the progression of treatment, we asked some questions to Prof. Marianno Franzini, International President of SIOOT, who announced that, towards the end of the week, he will have the data of 15 hospitals that are using Ozone Oxygen Therapy to treat Covid-19 positive people.

According to Franzini, the results are very good and we could save many more people if ozone therapy was practiced on patients in intermediate conditions and not only on those in serious or very serious conditions.

---

"It would be necessary - he stressed - to practice oxygen ozone therapy immediately to people who are positive, in order to heal them quickly and prevent them from getting worse".

In order to radically stop the spread of the virus, Prof. Franzini proposed to change strategy and to go home to treat asymptomatic people, people who have the first symptoms and positive with a mild course.

For the International President of SIOOT, 4/6 ozone oxygen treatments over the course of 8/15 days are sufficient to cure patients treated at home.

This could radically reduce the number of hospitalizations and treatments in intensive care.

"In this way, together with ozone sanitization of the environment - concluded Franzini - we could defeat the pandemic in a short time".

For any in-depth study and to have the SIOOT protocol for the treatment with ozone oxygen of Covid-19:
