

Oxygen Ozone therapy SIOOT: Number of Healed Cases Increases, Deaths Decrease

9 April 2020 – (SIOOT – Bergamo, Italy)

The application of the therapeutic protocol prepared by SIOOT (Scientific Society of Oxygen Ozone Therapy) for the treatment of Covid-19 is underway in several Italian hospitals. On March 24th the association had obtained the approval of the ISS (Istituto Superiore di Sanità) for the use of ozone oxygen therapy in the treatment of Covid-19. According to the second SIOOT report on the therapy applied to 46 patients suffering from Coronavirus, over 84% showed a significant improvement in clinical conditions. What clearly emerges is that ozone oxygen therapy is more effective especially before intubation.

These results also indicate the need for a change in therapeutic strategy aimed at a more timely intervention on patients who tested positive for the virus and the possibility of being treated in their own home, with less hospitalization. A choice that would make it possible to free up beds for normal therapeutic activities.

Prof. Valdenassi and Prof. Franzini of SIOOT say: "Covid-19 infection manifests itself with different levels of severity and involves not only the lungs but also different organs and districts, nerve axis, myocardium, vascular tree, entero-hepatic tract, creating a metabolic syndrome. We therefore considered it useful to propose and practice ozone therapy because of its physiopathological characteristics that seem suitable and specific in the treatment of this pathology. The first data show a positive path in terms of symptomatological responses supported by equally interesting haematochemical levels. The complete absence of collateral or secondary events is another favourable element, together with the low cost of therapy. With these considerations in mind, we hope that the institutional collaboration of SIOOT, which has developed from the approval of the ISS with respect to clinical protocols, to the dissemination of these protocols in hospitals and their presentation to the relevant ethical committees, can contribute in a useful and effective way to the resolution of this health emergency".
